# Starting Six

Simplify: $6y + 5p - 2y - p$

Factorise fully: $14y - 35y^2$

Expand and simplify: $3(5 - 2x) - 3x + 9$

Solve: $x^2 + 13x - 14$

Expand and simplify: $(x-5)(x-4)$

Write an expression for the perimeter:

$3x + 8$

$2x - 1$

$3x + 9$

A square has the same perimeter, write an expression for the side length of the square.

Score ____ / 6
