

3.1 Starting Six

Work out $1\frac{3}{5} - 1\frac{1}{6}$

Work out the size of each interior angle in this regular polygon

Find the n th term of the sequence:

3, 7, 11, 15

Is 71 a term in this sequence? Explain.

Solve: $\frac{8x-1}{2} = 3x + 3$

Expand and simplify

$(2x + 3)(x - 1)$

Factorise: $8a - 6a^2$

Factorise: $x^2 + 11x + 28$
