### 4.1 Starting Six

Work out the size of the interior angle in a hexagon.

A sequence has an nth term of $n^{2}-12$ Solve: $\frac{6 x-2}{2}=2 x+1$ Is 88 a term in this sequence?

Expand and simplify
$(2 x+1)(3 x+2)(x+1)$

Factorise: $8 a^{2}-a b$

Factorise: $x^{2}-4 x+3$

## Starting Six

Work out the size of the interior angle in a hexagon.
