${ }^{20}$ Starting Six

Draw a table of values for the graph $y=3 x-2$ between the points $x=-2$ and $x=4$

Are these two lines parallel?
You must explain your reasoning.
$L_{1}: \quad y=3 x+2$
$L_{2}: \quad 2 y=4-6 x$

For the graph $y=6 x-5$

What is the value of $y$ when $x=-1.5$

Where do the lines $y=2 x+5$ and $y=3 x+2$ intersect?

James said this line has the equation $y=2 x+4$, is James correct? Why?

Work out the gradient between the points
$(4,7)$ and $(2,8)$
