

# Starting Six

Multiply:  $0.67 \times 0.23$

Simplify:  $\sqrt{98}$

Complete the sum:

$$2\frac{2}{3} + 3\frac{2}{5}$$

Convert  $0.\dot{4}$  into a fraction

The length of a piece of metal is 3.7cm to the nearest mm.

Write down the error interval:

Rationalise the denominator:

$$\frac{6 + 5\sqrt{7}}{\sqrt{7}}$$
