

Convert: $\frac{29}{6}$

When converting an improper fraction, first see how many times the denominator goes into the numerator.

$$29 \div 6 = 4 \text{ remainder } 5$$

$$= 4 \frac{5}{6}$$

Remember to try and simplify if possible!

$$4 \frac{5}{6}$$

Convert: $5 \frac{3}{4}$

When converting a mixed number, first multiply the 'big number' by the denominator.

$$5 \times 4 \rightarrow \frac{20}{4} + \frac{3}{4}$$

Then add the two fractions together!

$$\frac{23}{4}$$

Convert: $\frac{29}{6}$

When converting an improper fraction, first see how many times the denominator goes into the numerator.

$$29 \div 6 = 4 \text{ remainder } 5$$

$$= 4 \frac{5}{6}$$

Remember to try and simplify if possible!

$$4 \frac{5}{6}$$
